

Beam, Bar & Joist Options

Belcher Equipment realizes that different applications require totally different structural mezzanines. For light duty applications, our C Channel system is one of the most cost effective solutions on the market while our Type 3 Connection sets the standard for strength, durability, and stability. If offices are part of the plan, you can save by using one of our loadbearing modular wall systems.

C Channel Formed C Channels are used for small spans or as an effective alternative for light-duty applications. This system is our best selling line because of its low cost and ease of installation.

C Channel Open Web Bar Joists An economical alternative for projects requiring large spans, open web bar joists are a proven structural component widely used in construction. They simplify the installation of sprinkler systems, electrical conduit, and mechanical equipment.

Open Web Bar Joists Storage Roof One of the most cost effective ways to add both storage and office space is to utilize one of our loadbearing modular wall systems. The OmniFlex 300 Plus, for instance, can be outfitted with loadbearing roof beams that can accommodate mezzanine floors.
