

## About Woven Wire Partitions

**SIMPLE** Our modular system utilizes twenty standard panels to accomplish nearly any layout. These panels simply bolt between posts. Drawings provided with each order make installation easy enough for your own personnel.

**STRENGTH** Panels bolt to posts which have welded base plates for direct anchoring to the floor; no brackets or shoes to come loose.

**FAST** Our angle frame panels with slotted bolt holes give clear access to assembly hardware and allow fine tuning adjustments without compromising the strength of the installation. Our system does not require level floors and precise alignment like some hook and slot mounting systems.

**TAMPER-PROOF** Our 3/8" hardware - the heaviest in the industry - is inaccessible from the exterior of the partition, preventing intruders from disassembling the parts to gain access to secured items.

**QUICK-SHIPPING** Our continued commitment to customer service dictates that we maintain an inventory of stock size parts ready for shipment with 48 hours of receiving your order.

**OPEN BUT SECURE** The woven wire mesh construction provides a formidable barrier to intruders, while allowing the free passage of existing lighting, sprinkler, and ventilation systems.

We have the ability to produce many different sizes of woven wire mesh for use in special partition applications. The most popular mesh sizes are stocked and ready for your special requirements. Our large inventory of these items allows us to make fast deliveries.

### Stocked Sizes:

- 2" x 1" rectangular opening 10 gauge (.135)
- 3/8" square opening 12 gauge (.105)
- 1-1/2" square opening 8 gauge (.162)
- 2" square opening 6 gauge (.192)
- 3/8" square opening 12 gauge (.105)

- 2" square opening 6 gauge (.192)
- 1-1/2" square opening 8 gauge (.162)
