

Selective Pallet Rack

Selective pallet rack or pallet racking is the best solution for warehouses where it is necessary to keep a wide variety of articles in pallets. Selective pallet racking enables:

- direct access to all stored pallets.
- the advantage of handling one pallet without the need to move the others.
- easy stock control as each place is a one-pallet position.
- absolute load storage flexibility, both in terms of weight and volume.

Pallet rack storage can be combined with wide span shelving for manual selection of products for order preparation.
