

## Woven Wire Storage Lockers

All-steel woven wire storage lockers are ideal for secured storage areas in large rooms or under utilized areas. These lockers will add efficiency to the storage area, secure stored items, and eliminate clutter in room.

Storage areas are built from two different types of lockers, a Starter Unit and an Add-On Unit. The Starter Unit is three sided; it consists of two wall panels and a door panel. The Add On Unit is two-sided and consists of a wall panel and a door panel. Add-On Units install adjacent to Starter Units or in the corner of existing rooms.

Lockers come in two styles, single or double tier. The single tier locker has one door which accesses a single storage space. The double tier locker has two doors which access two separate storage areas. Both styles are available in many sizes.

All lockers are made of industrial grade materials 10 gauge steel wire mesh welded into angle frames. Locker types, styles, and sizes may be mixed to meet your needs.
